**Additional parts upon request:**

**Prices quoted at time of order.**

Pre charge system allows filling and draining excess water prior to disposal of the spent garnet. Windows are included in this package.

### **Included**

1" heavy duty aviation fuel transfer suction line 84" and 144" lengths

**PRICED PER FOOT**

The features of the XR2500HD are the 59" tall holding tank along with portability. This unit can be used on multiple jets rather than being dedicated to one specific waterjet. The features that make the XR2500HD stand out from the smaller models are the ability to vacuum the slimy mud from the catch tank. All of the Xtractors will accomplish this task but the HD pump on this unit works the best with a longer reach hose set. The air consumption is by far less than the XR2500 and the XR1500 with.

This machine needs no additional items to be able to start removing garnet from your waterjet catch tank. Just a simple air hose from the waterjet and your ready to go!
